

## Typhoon Hagupit: Projected Affected Areas Based on the PAGASA Forecast

This map shows the actual and forecast paths of the typhoon based on PAGASA's forecast as of December 8, 2014 at 8AM. 50km (Extremely Affected), 100km (Highly Affected), and 200km (Moderately Affected) radii from the track were generated in GIS. Municipalities in Extremely and Highly Affected zones are shown. Population is based on EPRU's computed estimated 2013 population of NSO data.
